

Perl Unicode::EastAsianWidth Packaging for Opensuse

Hartmut PILCH

<http://a2e.de/adv/pak/perl-Unicode-EastAsianWidth>

May 18, 2009

1 Chronology

1.1 2009-04-22 InFullwidth works, InEastAsianFullwidth maybe not

- A test script shows how it works:

```
#!/usr/bin/perl
# Time-stamp: <2009-04-22 00:13:43 phm>

use Unicode::EastAsianWidth;
use utf8;
use Encode qw(encode decode);
my $str = '網誌';
($val) = $str =~ m(\A(\p{InEastAsianWide}+)\Z);
print encode('UTF-8', $val), "\n";
$str = '1 2 3';
($val) = $str =~ m((\p{InFullwidth}{2}+));
print encode('UTF-8', $val), "\n";
```

- Output is

```
網誌
1 2
```

- I was not able to figure out what InEastAsianFullwidth matches
- We use this in A2E::Mktdir to allow us to require certain document metadata to be written in wide characters
