

Perl WWW::Sitemap Packaging for OpenSuse

<http://a2e.de/adv/pak/WWW-Sitemap>

May 18, 2009

1 Chronology

- changed shebang line in sitemapter.pl to use /usr/bin/perl instead of non-existent /bin/env
 - the latter introduces an unfulfillable requirement into the RPM package
 - we should have done this with a patch but, given the shallowness of the change, opted for the lazy approach
- Without further hacking, the program sitemapter.pl and its base libraries are incapable of dealing with Unicode and thus basically useless in any internationalised working environment.
